

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A display system for a handheld computing device, the display system comprising:
 - a ~~visual~~ display unit having a display screen and a communications transceiver;
 - a ~~processing-unit handheld device~~ having a communications transceiver and sending display data to the transceiver of the visual display;
 - a first power source for the processing unit; and
 - a second power source for the ~~visual~~ display unit, wherein the ~~visual display unit~~ is physically separable and detachable from the ~~processing-unit handheld device~~ while displaying information according to communications from the ~~processing-unit handheld device~~ between the ~~visual~~ display unit transceiver and the ~~processing-unit handheld device~~ transceiver and the display screen is flexible and expandable and the display system includes a display driver[[s]] capable of updating screen resolution and screen display size based upon the current expansion of the display screen, and wherein the ~~processing-unit~~ is a handheld device.
2. (Currently Amended) The display system of claim 1, wherein the ~~visual display unit~~ includes random access memory (RAM) and a processing unit (CPU).
3. (Currently Amended) The display system of claim 2, wherein the ~~visual display unit~~ CPU receives information over a wireless connection from the handheld ~~computing~~ device and stores the information in the ~~visual display unit~~ RAM.
4. (Currently Amended) The display system of claim 3, where the information communicated from the ~~handheld device processing-unit~~ to the ~~visual display unit~~ includes information necessary to display the current display image and information related to the current display image.
5. (Cancelled)

6. (Cancelled)
7. (Cancelled)
8. (Currently Amended) The display system of claim 2, wherein the ~~visual display includes a display screen having~~ includes input capabilities.
9. (Cancelled)
10. (Cancelled)
11. (Cancelled)
12. (Original) The display system of claim 1, wherein the communications transceivers send and receive information using a custom wireless communication protocol.
13. (Cancelled)
14. (Currently Amended) A handheld computing device comprising:
a detachable display system including a wireless transceiver;
a handheld device processor;
a wireless transceiver coupled to the handheld device processor and communicating with the display system transceiver such that the display system is capable of displaying information according to information received from the handheld device via the display system transceiver while the display system is detached from the handheld device;
and
an information storage system, wherein the display system includes a flexible and expandable screen display, ~~and the processor is a handheld device and is configured with~~ the handheld device comprising a display driver[[s]] to update display resolution and screen display size based upon the current expansion state of the flexible and expandable screen display.
15. (Cancelled)

16. (Currently Amended) The handheld computing device of claim 14, further comprising:
- a first power source associated with powering the handheld device ~~processor~~; and
 - a second power source associated with powering the detachable display system.
17. (Original) The handheld computing device of claim 16, wherein the second power source is lighter in weight than the first power source.
18. (Original) The handheld computing device of claim 14, wherein the display system includes Random Access Memory (RAM) memory.
19. (Currently Amended) The handheld computing device of claim 18, wherein the transceiver coupled to the handheld device ~~processor~~ transmits information related to current display screen information to the display system to store in the display system RAM while the current display screen information is being viewed.
20. (Currently Amended) A computing system, comprising:
- a handheld computing device ~~processing unit~~, the handheld computing device ~~processing unit~~ including a first processor, a first transceiver coupled to the first processor, a first memory coupled to the first processor, and a first power source coupled to the first processor;
 - a first display unit, the first display unit including a first display area, a second processor, a second transceiver coupled to the second processor and communicating with the first transceiver, a second memory coupled to the second processor, and a second power source coupled to the second processor; and
 - a second display unit, the second display unit including a second display area, a third processor, a third transceiver coupled to the third processor and configured for communications with the first transceiver, and a third power source coupled to the third processor;

wherein the first display unit and the second display unit may be interchangeably attached to and detached from the handheld computing device while displaying information received via the first transceiver processing unit and the processing unit is a handheld computing device and the first display unit is a non-flexible display unit and the second display unit is at least one of a flexible display unit and a foldable display unit.

21. (Cancelled)

22. (Original) The computer system of claim 20, wherein the first display unit requires a second power source that is lighter weight than the third power source.

23. (Original) The computer system of claim 20, wherein the first display unit is a ruggedized display unit.

24. (Original) The computer system of claim 20, wherein the first display area is a high resolution display and the second display area is a lower resolution display area.

25. (Cancelled)

26. (Cancelled)

27. (Cancelled)

28. (Cancelled)
